

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

District.	Number of deaths.	Date of last report.
Sui Hwa.....	1,169	Feb. 26
Tsi Tsi Har.....	703	Feb. 26
Hai Lun.....	182	Feb. 27
Kirin.....	330	Mar. 4
I Tung.....	108	Feb. 27
Yu Shu.....	432	Feb. 16
Shwang Cheng.....	5,167	Feb. 19
Wu Shang.....	134	Feb. 25
Shu Lan.....	118	Feb. 18
Tah Lal.....	17
Total.....	26,995	

The above table does not include all the infected districts. Asiho and Hailar, both large places and badly infected, are omitted. Whole villages in the vicinity of Kungchuling are known to have been wiped out. No account seems to have been taken of a small settlement near Mukden, on the Hun River, to which about 300 of the poorest class were sent from Mukden, 168 of whom are known to have died of plague.

A crematorium is now being constructed at Mukden and all plague corpses will hereafter be cremated.

SWATOW—PLAQUE AND SMALLPOX IN DISTRICT.

Consul Williams reports, March 11:

Plague and smallpox are present in the consular district, but not in epidemic form.

CUBA.

NO QUARANTINABLE DISEASES IN THE ISLAND.

Acting Asst. Surg. Villoldo at Habana reports, April 4:

During the week ended April 1 no quarantinable diseases were reported in the island of Cuba.

HAWAII.

CHOLERA AT HONOLULU.

Chief Quarantine Officer Ramus reported the occurrence on April 15 of 2 cases of cholera with 2 deaths and on April 16 the occurrence of a death from cholera, making a total from April 12 of 4 cases with 4 deaths, and a total from the date of the previous outbreak, February 25, of 35 cases with 26 deaths.

RECORD OF PLAGUE INFECTION.

Last case of human plague at Honolulu occurred July 12, 1910.

The last plague-infected rat was found at Aiea, 9 miles from Honolulu, April 12, 1910.

At Hilo the last case of human plague occurred March 23, 1910. A fatal case occurred at Honokaa, 60 miles from Hilo, December 17, 1910, and 2 fatal cases were reported January 31, 1911.

The last plague-infected rat was found at Honokaa February 2, 1911.
